

Your unique biometrical report

Dermatoglyphics is a scientific study of patterns on fingers, palms, toes and soles in humans. Friction ridge is formed by the 13th week of intrauterine growth and never change. The similarity of embrional origin of the skin and nervous system guarantees an adequacy of dermatoglyphic data in brain research. The skin patterns reflect a complex growth and differentiation processes of tissues during the ontogenesis period.

Potential of Nervous System

The nervous system ensures the existence of the person in the environment and has a highly organized structure. The central nervous system ensures the body self-regulation and the contact with the environment. Common pattern and differentiated properties may be identified in the way of functioning of different nervous system structures. The intensity and combination of the differentiated properties reflect natural differences in the mentality of people and allow identifying the types.

STRONG NERVOUS SYSTEM

This type is characterized by strength, mobility and lack of balance between the excitation and inhibition processes (excitation dominates over inhibition). People with such type of nervous system are decisive in their actions and are able to withstand heavy nervous and emotional loads. So, in a stress situation, such people are able to take "sound" decisions, to withstand a high emotional and mental tension in a conflict or even be an initiator.

They are easy to warm-up and characterized by high or even excessive rate of activity, ability to switch easily from one work to another. At the same time, they need enough time and conation in order to complete an activity and go to rest and relaxation.

The advantage of this type is the ability to achieve high results for a short period of time under stress.

Type of Behavioural Adaptation

THINKER

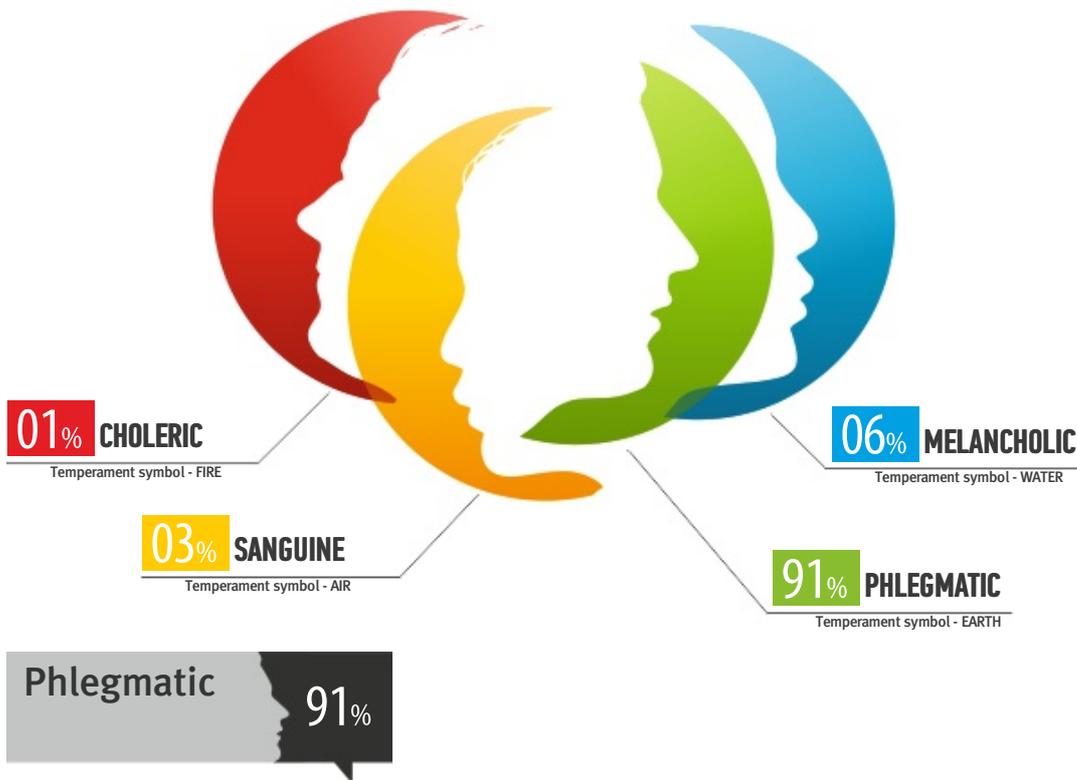

Personality development: You are a genius and custodian of the intellectual genofond of the nation (a generator of various ideas being far ahead of your life). You will be looking for the most favourable environment for your personal fulfilment. You will strive to embody your every intention (even if it will be necessary to change the place of residence). Your existence will be based upon a tendency to preservation of the national heritage, different community traditions, etc.

Type of behavioural adaptation: You will obtain necessary information from written sources and Internet. You may attain great heights by mastering any science. You are persistent in pursuing your goal, and it will be difficult to persuade you or to change a thought already chosen. When you have difficult times you must be alone for a while. Having collected your thoughts you will take the only right choice. You are gifted. You always let everything through; therefore your inner senses will form your feelings. You ably conceal your feelings and your emotions are not always can be anticipated by other people. Therefore the people around you may be confused due to unpredictability and irregularity of your emotional reactions.

Negative features: You should learn to be an interesting talker among your peers. To learn how to make people interested in your expertise and exciting stories. To perceive everything that happens with optimism. Not only to appreciate particular features in people, but also be lenient towards their negative features. To be kind, considerate and careful. To learn how to express your emotions and feelings to those that you love and to your children. You should develop higher mobility and activity and avoid manifestations of indifference to the activity and being lazy.

Temperament

A strong, well-balanced, and inactive type. The behaviour is smooth and calm; you not often lose your temper and are not disposed to affects. The mood is stable without and extremity of joy or sadness. The movement responses are slow. The speech is without pronounced emotions and gestures. The adaption to new conditions is relatively slow. New forms of behavior in phlegmatic persons develop slowly but are stable. A phlegmatic is characterized by moderation and profundity of thoughts. This temperament type is characterized by low activity level. It is not easy for phlegmatic persons to get involved and switch over from one activity to another, as they are very concentrated. They are very patient, do not waste their energy, are consistent and comprehensive. They have no genius for making friends. They have not many friends, but stand by them. You are a person of indefatigable industry. It is easy for a phlegmatic person to develop moderation, composure, and coolness. However phlegmatic persons should develop features that they lack - mobility and activeness. Do not let you exhibit indifference to work, apathy, and passivity, which may easily develop in certain conditions. Phlegmatic persons have a tendency to methodical work, ability to focus on the set task, and thoughtfulness - necessary professional qualities of a scientist or researcher.

Novelty Perception

This section describes the way you perceive new information. The characteristic with the highest index corresponds to you.

CONSERVATIVE

INDIVIDUAL

LIBERAL

Liberal. You easily perceive new information and new ideas, follow trends and fashion. You need new feelings and emotions. It is easy for you to socialize with other people and perceive their point of view.

Individual. You perceive new information in your own manner, with care. You do not like when anybody imposes his/her view on something. You always try to verify facts, analyze information and are not quick in decision.

Conservative. You perceive only verified information and rely upon facts, logics and your own experience. In the society, you stand firm and perceive only practical information.
